CYBER SECURITY

By Sebas

PHISHING ATTACKS

- Definition: the fraudulent practice of sending emails or other messages purporting to be from reputable companies in order to induce individuals to reveal personal information, such as passwords and credit card numbers.
- **Spain busts voice phishing ring for defrauding 10,000 bank customers**

COMMON THREATS

VIRUS

A piece of code that is capable of copying itself and typically has a detrimental effect, such as corrupting the system or destroying data.

RANSOMWARE

a type of malicious software designed to block access to a computer system until a sum of money is paid.

TROJANS

A malicious program disguised as legitimate software. Users intentionally install a Trojan Horse, thinking they are installing valid software.

SPYWARE

Software that secretly collects information about you. It usually resides on a website or in a service such as your email program.

HOW TO KNOW IF SPYWARE IS ON YOUR COMPUTER

SECURE PASSWORDS

To make a secure password you need a couple things like

- 14 characters' long
- A combination of uppercase letters, lowercase letters, numbers, and symbols.
- A word that can't be found in a dictionary or the name of a person, character, product, or organization.

EX: m#P52s@ap\$V

WHAT IF YOU THINK SOMETHING SUSPICIOUS IS GOING ON???

Firewalls

Double check firewalls and make sure they are up to date

Antivirus Software

Make sure antivirus software is updated and activated

Performance on computer

If your computer starts being slow, random popups and system crashes should be checked for before anything is reported
